DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/2/08 has been entered.

Claim Objections

Claims 21 and 31 objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claims require the same subject matter that is already disclosed in the last (protuberances extend from anterior and or posterior sides of the haptics) and second (the extensions are haptics) paragraphs of their independent claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 46-49 are rejected under 35 U.S.C. 103 as being unpatentable over Keates et al. USPN 5,171,319 in view of Schlegel USPN 4,673,406.

Keates discloses the invention substantially as claimed being an intraocular lens system comprising a lens 20, extensions 32, 2 protrusions 24, and narrow grooves 18 that extend transversely across the extensions from one end to the other. However, Keates does not disclose at least 4 protrusions on the extensions.

Schlegel teaches the use of an intraocular lens comprising 4 protuberances 15 shown best in figure 4 in the same field of endeavor for the purpose of anchoring the implant.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the 4 separate protuberances with the implant of Keates in order to better anchor the implant.

Allowable Subject Matter

Claims 9-13, 17, 22, 25-27, 30, 32-45, 50-55, 57, 59 and 60 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 46-49 have been considered but are moot in view of the new ground(s) of rejection. Applicant is advised to amend claim 46 to resemble the other independent claims.
